Apparatus and Methods for Producing Data Structures Having Internal Self-References Suitable for Immutably Recording Transactions Over Time

Abstract

Apparatus and methods described herein relate to a computer implemented method that includes performing a first work step associated with a first activity and with a first data product and performing a second work step associated with a second activity and with a second data product, the second work step being performed after the first work step, the second activity being different from the first activity, the second data product being different from the first data product, the second data product and the first data product each comprising a plurality of data elements, at least one data element of the second data product being dependent on at least one data element of the first data product, the second data product comprising a second data element that is independent of the first data product and is not defined by substituting the first number threshold and the second number threshold into a predetermined function.
